Erasmus Internship Program for Summer 2010

I am an Erasmus student looking to do my internship in Europe. This program allows me to work in Europe for Summer 2010. I am an undergraduate student in Mechanical Engineering Department in Cukurova University, Turkey. I am in average academic standing, have 2.11 GPA. I would like to start my professional career by doing an internship with your company. Real life engineering problems are very challenging and different than what we see in school. For this reason I would be very excited to have this experience and am willing to put all my attention to light the spark on my career. I am a hard-working person and eager to learn. I have a good work ethic, like to take responsibilities and am able to complete my tasks. From the outset of this program, I intend to gain real work experience and knowledge, which will possibly lead to a full-time position.

The main reason I want to do an internship is to gain valuable work experience. Hands-on experience is the most important issue when one is being considered for a position. Companies look for people who are efficient and know what they are doing. On the one hand, I believe real life application differs than the problems I encounter in school. However, the excellent education I am receiving at Cukurova University is teaching me proficiency in learning new tasks quickly, adapting and providing the opportunity for me to reach the level of professionalism I greatly desire.

The working knowledge I am going to receive is another reason that I would like to do an internship with your company. I am willing to donate my full attention and I am aware that I will be learning invaluable working skills. I am a self-starter with the ability to handle multiple tasks. Additionally, I have a thorough theoretical knowledge and am willing to share it in my workspace. I can use computer software such as Pascal Language, AutoCAD and MS Office. I am really easy to get along with and I believe working with other engineers would add to my skill set. I am eager to meet with them.

I truly believe the experience that I will have as an intern in your company is going to prepare me for a full-time job. I would also like to settle into a good company where I can become proficient with what I am doing and hopefully develop my knowledge and skills. As an intern I will contribute to this program in every way that I can. Even though it will be a challenge for me at the beginning, my contribution will gradually increase and I can confidently state that I would be an efficient employee to help you in your company. My self-motivation, eagerness to learn different things and my ambition to step forward will be the key elements to reach success.

In summary, I am asking to be a part of your team. It would be a tremendous privilege for me to do an internship with your company. I am willing and able to complete the work required to meet my goals of not only becoming a great engineer but also of one day helping the people of the world who are less fortunate than I. Thank you in advance for your consideration.

Sincerely,

(İsim/Soyad), Cukurova University, Turkey
